

Implementing ergonomics programs from the ground up for a healthier, more comfortable workplace.

All Humanscale ergonomists have bachelor's or master's degrees in Human Factors & Ergonomics from accredited universities. Each has a strong foundation in current principles and methods, a passion for education and training, and hands-on experience implementing practical, cost-effective solutions.

What We Do

Humanscale Consulting assists organizations with ergonomic program development and implementation. Whether your employees work in an office, industrial, laboratory, or healthcare environment, our research-based approach improves worker comfort and satisfaction while lowering injury rates and associated costs.

Our team of ergonomists:

- Implement formal ergonomics programs
- Train employees and management on key ergonomic concepts
- Conduct assessments, audits, and train-the-trainer programs
- Identify and minimize injury risk factors
- Maximize the value of investments in ergonomic tools

Why We're Different

At Humanscale Consulting, our goal is simple: to develop and implement self-sustaining ergonomics programs.

Through expert evaluation, training and implementation, we provide organizations with the information and tools they need to create and maintain healthy work environments for their employees.

Our Approach

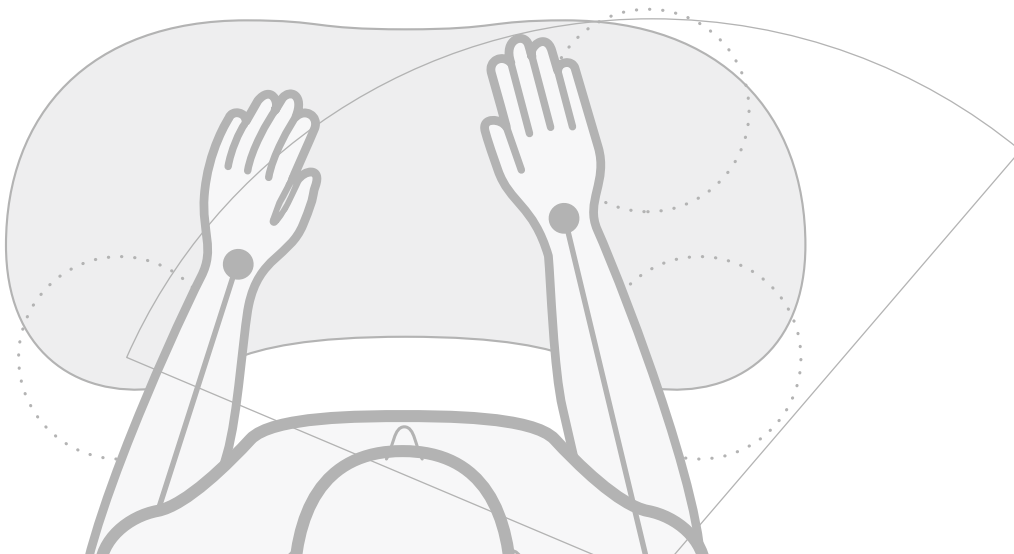

Humanscale Consulting employs a five-component program aimed at reducing costs and improving comfort in the workplace.

Program Development & Implementation Strategy

We begin by working with your team to identify program objectives and introduce metrics that will ensure goals are met within your desired timeframe.

Auditing

Our ergonomists utilize the results of this on-site evaluation of musculoskeletal risk, environmental factors, equipment challenges and employee comfort to prioritize and implement necessary action steps. Baseline discomfort data is later used to gauge the program's success.

On-Site Training

Humanscale Consulting offers a three-fold training program:

- 1 Ergonomics 101: Working Pain and Risk Free**
This primer for all staff on ergonomics principles and proper workstation configuration includes ergonomist-assisted workstation fittings for all participants, as well as documentation detailing all findings.
- 2 Train-the-Trainer**
Designed to build a first line of defense against work-related discomfort, this in-depth training program arms designated in-house practitioners with the skills to identify and address ergonomic risks in a consistent and organized manner.
- 3 Product Training**
To ensure the benefits of ergonomic work tools are fully realized, this session trains staff on their intent and proper use.

Assessment

Through comprehensive assessments of each employee and their work environment, our ergonomists gather data using our customized web-based assessment tool to shape our recommendations, from workstation design to postural modification.

Program Management

To ensure your ergonomics strategy is succeeding, our consultants gather data to measure and document your program's continued success.
